

SILO & STORAGE SYSTEMS

HRS-02

Chain Conveyor Systems

CAPACITY

20 t/s – 1000 t/s (tesis ihtiyacına göre projelendirilir)

DIMENSIONS

Zincir Tipi Projeye özel zincir seçimi (farklı zincirler için farklı boyutlar)

PRODUCT DESCRIPTION

Reliable Horizontal Conveying

Agrofine chain conveyor systems are designed for the safe, continuous and high-capacity conveying of grain and granular products on horizontal and low-incline lines. The systems are engineered to suit different capacities and line lengths for silo facilities, grain storage centres, feed mills and industrial processes.

Capacity and Performance

Agrofine chain conveyors can be designed to operate within a capacity range of 20 tonnes per hour to 1,000 tonnes per hour, depending on the facility's requirements. Thanks to the optimised conveying system, high-efficiency product flow, minimal product breakage, low energy consumption and continuous, balanced operation are ensured.
