Earthscape Grow Bag and Cocopeat

**PRODUCT DESCRIPTION**

Earthscape is a Sri Lanka-based brand specialising in professional Grow Bag solutions. Alvetra Global Solutions is the sole authorised sales distributor for the Earthscape brand in Turkey; consequently, Earthscape is offered under an authorised distribution agreement, separate from our group's other production brands. High-quality Grow Bag products for modern greenhouse and soilless farming applications provide growers with a productive and sustainable growing environment. What is Cocopeat? Cocopeat is a completely natural and sustainable growing medium obtained by processing the outer husk of the coconut, which remains after the edible part has been removed. The coconut husk offers ideal properties for plant cultivation thanks to its durable fibre structure, husk particles of varying sizes and fine organic peat-like texture. During the production process, the husks undergo special treatments to separate them into coarse and fine fractions. Husk Chips: Consist of coarse husk fragments and natural fibres. They enhance the medium's aeration, support root development and improve drainage performance. Cocopeat: Obtained by sifting out fine organic particles to remove dust. Thanks to its high water-holding capacity, it retains the moisture required by the plant for an extended period. Natural, Reliable and Sustainable, Cocopeat is recognised as one of the world's most productive rooting and growing media. * 100% natural and organic. * Renewable and environmentally friendly. * Supports sustainable agriculture with its recyclable nature.
